## TO DISPOSE OF DEAD HOGS.

There is trick to the job of burning the carcasses of dead hogs; and where they have died of cholera the trick should be learned. Dig two trenches crossing each other. Make them several inches deep. Pile the fuel at the crossing of the trenches. Lay a large iron wheel or strips of metal to hold up the carcass. Open the carcass completely, spread it open, and lay it belly down on the support over fuel. Sprinkle kerosene liberally inside the hog before putting it in place. Light the fuel. The carcass will burn fiercely, especially if the hog was fat. The trenches and the metal supports are for draft, and the dimensions of these things depend on the size of the carcass. This system is recommended by the Nebraska Station.—Farm and Fireside.
